

## **The Global Research Alliance on Agricultural Greenhouse Gases:**

### ***Improving Sustainable Agriculture through International Cooperation***

**Agriculture plays a vital role in food security, poverty reduction and sustainable development. The sector faces significant challenges in meeting a dramatic increase in global food demand, while reducing its contribution to greenhouse gas emissions.**

**The Global Research Alliance on Agricultural Greenhouse Gases brings countries together to find ways to grow more food without growing greenhouse gas emissions.**

**Come and hear from countries that are partnering under the Alliance to develop the technologies and practices that will help deliver ways to grow more food (and more climate-resilient food systems) without growing greenhouse gas emissions.**

**Tuesday,  
November 13<sup>th</sup>  
4:00-5:00 p.m.  
U.S. Center, Level 2**
