mchacon@mag.go.cr

Background

Country ambitions beyond NAMAs

COMPETITIVENESS
of the AGRO SECTOR

NATIONAL STRATEGY FOR LOW CARBON LIVESTOCK

The livestock sector represents the **28.6%** of total GHG emissions of the country

20.4% of the country land is under permanent pastures from which **53.3%** are classified as improved pastures

18,6% of the country total forest area are located in cattle farms

90 percent of farmers in the country are small scale producers

LIVESTOCK NAMA

CO₂

ECONOMIC EFFICIENCY

Sustainable Intensification
Compliance with national targets for livestock productivity

Meat: 189.6kg/Ha/year

Milk: 36.3Kg/Ha/Day

MITIGATION AND ADAPTATION

The current proposal for Costa Rica's Livestock NAMA aims at generating **834 thousand tCO₂eq** of reduced emissions annually by 2021; and the full implementation of the NAMA could produce an estimated **13 million tCO₂eq** of reduced emissions by 2030.

Barriers to mitigation

Knowledge

Financial

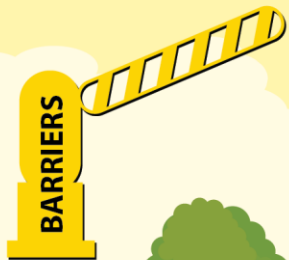

Institutional

Cultural

BARRIERS TO CHANGE

Barrier
1

Administrative and management capacity of farmers

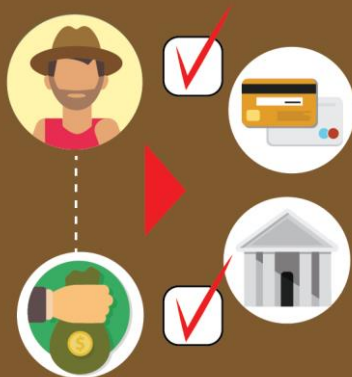

Barrier
2

Administrative and management capacity of producer organizations

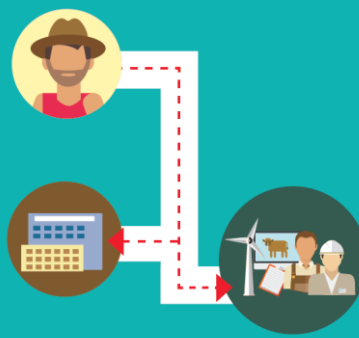

Barrier
3

Access to credit/financing by farmers

Barrier
4

Access to local institutional and technical support services

Barrier
5

Capacity for knowledge transfer

NATIONAL STRATEGY FOR LOW CARBON LIVESTOCK

PUBLIC POLICY

**NATIONAL LIVESTOCK
PROGRAMME**

NAMA

TECHNOLOGY

**INVOLVEMENT
OF PRIVATE SECTOR**

**PUBLIC-PRIVATE
PLATFORMS**

**ENABLING
CONDITIONS**

PILOTO

2017

SUB-NATIONAL SCALE

2021

**NATIONAL
SCALE**

2030

THE THEORY OF CHANGE

LIVESTOCK NAMA

Live fences

Rational grazing

Improved pastures

Improved fertilization

N° of trees

+ Efficient pasture use and space

Animal density and productivity

Emissions N_2O

Capture CO_2 in trees

Biodiversity conservation

Improvement in soil quality

Healthier pastures

Improved diet

Capture CO_2 in soil

Improving landscape connectivity

Improved water quality

Emission N_2O

Emissions enteric f.

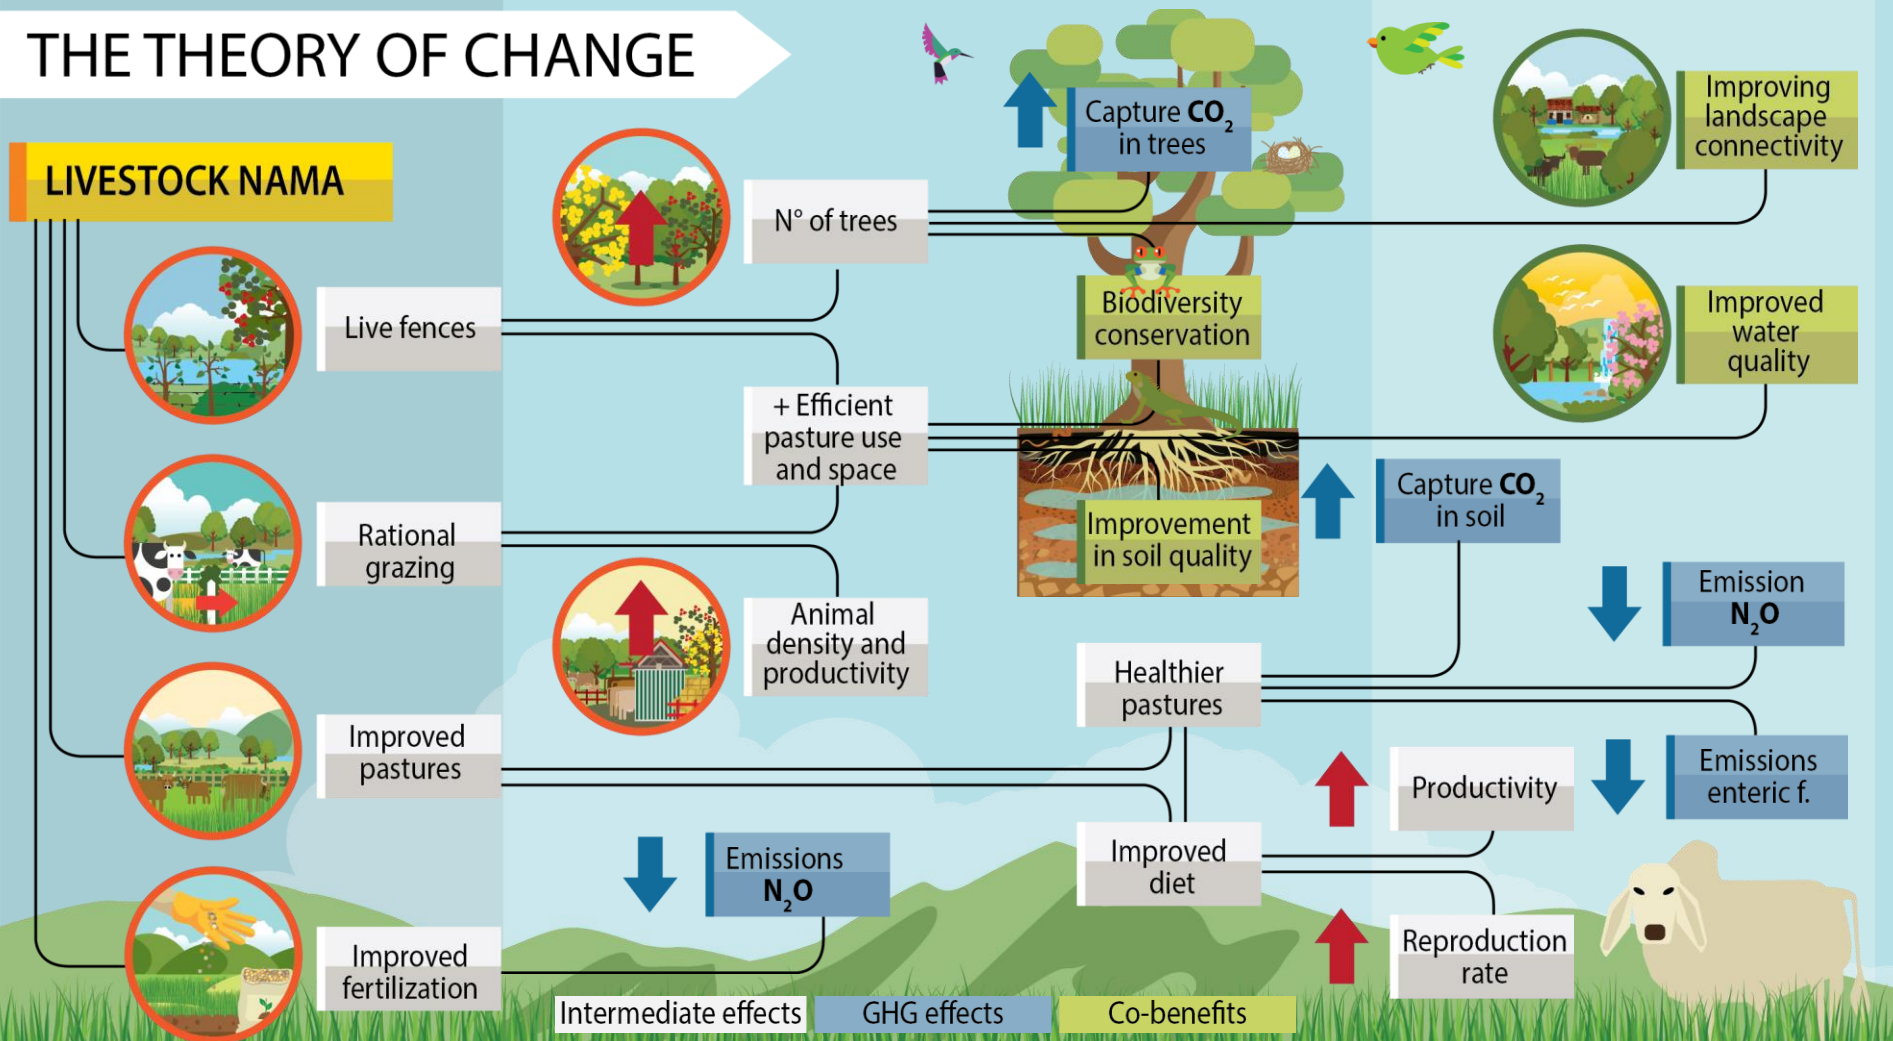

Productivity

Reproduction rate

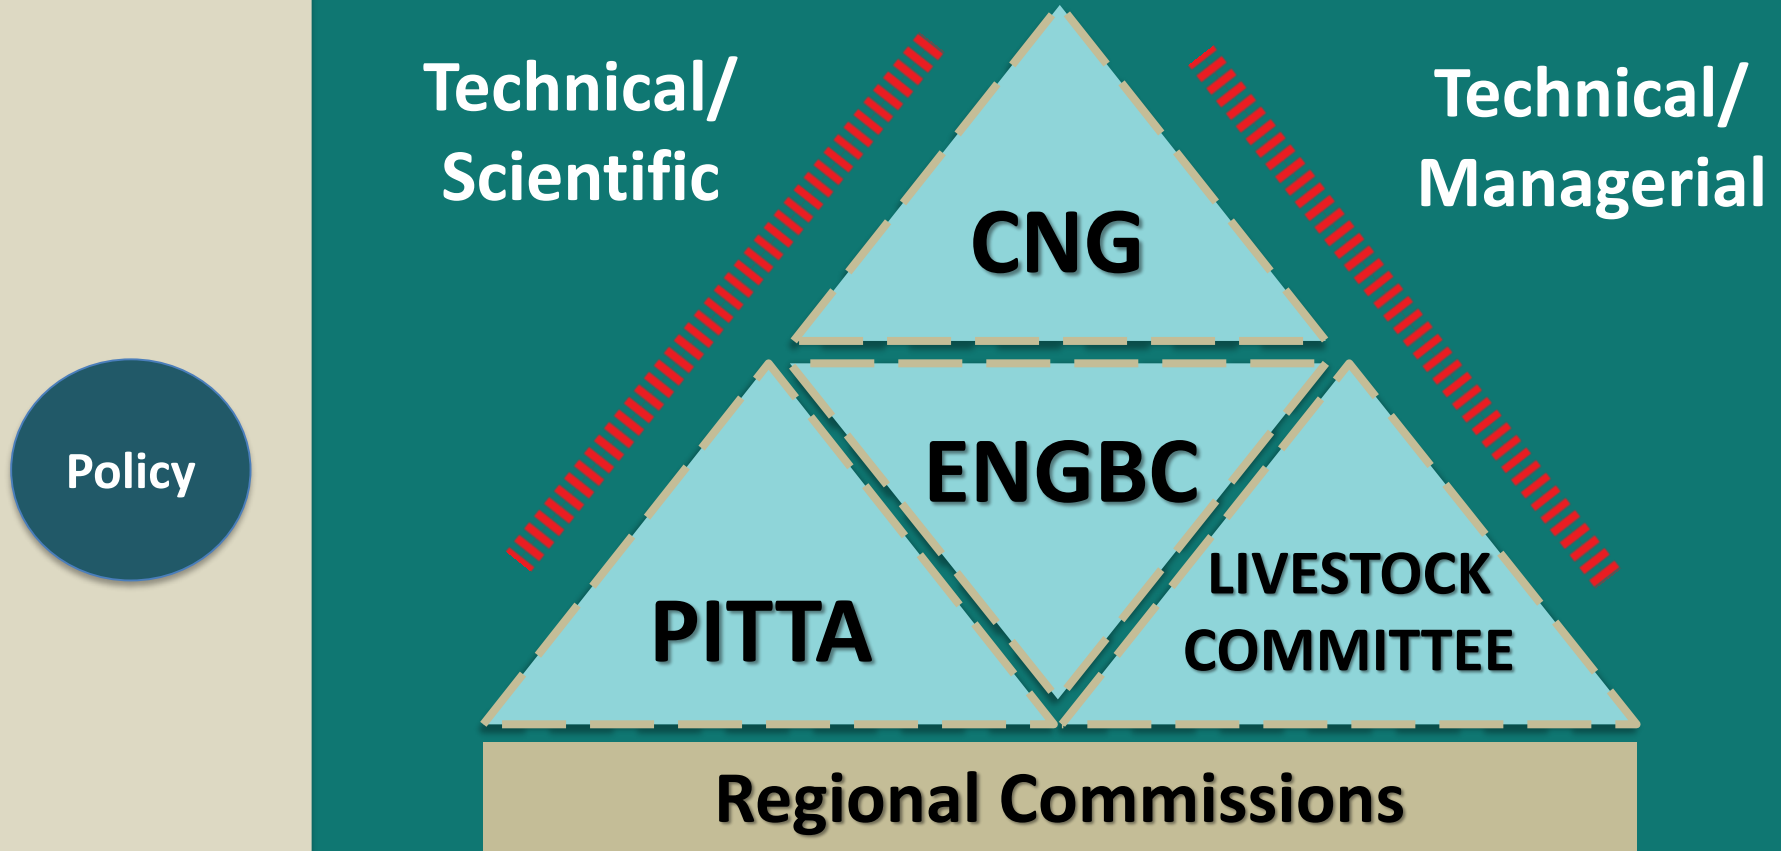

Intermediate effects

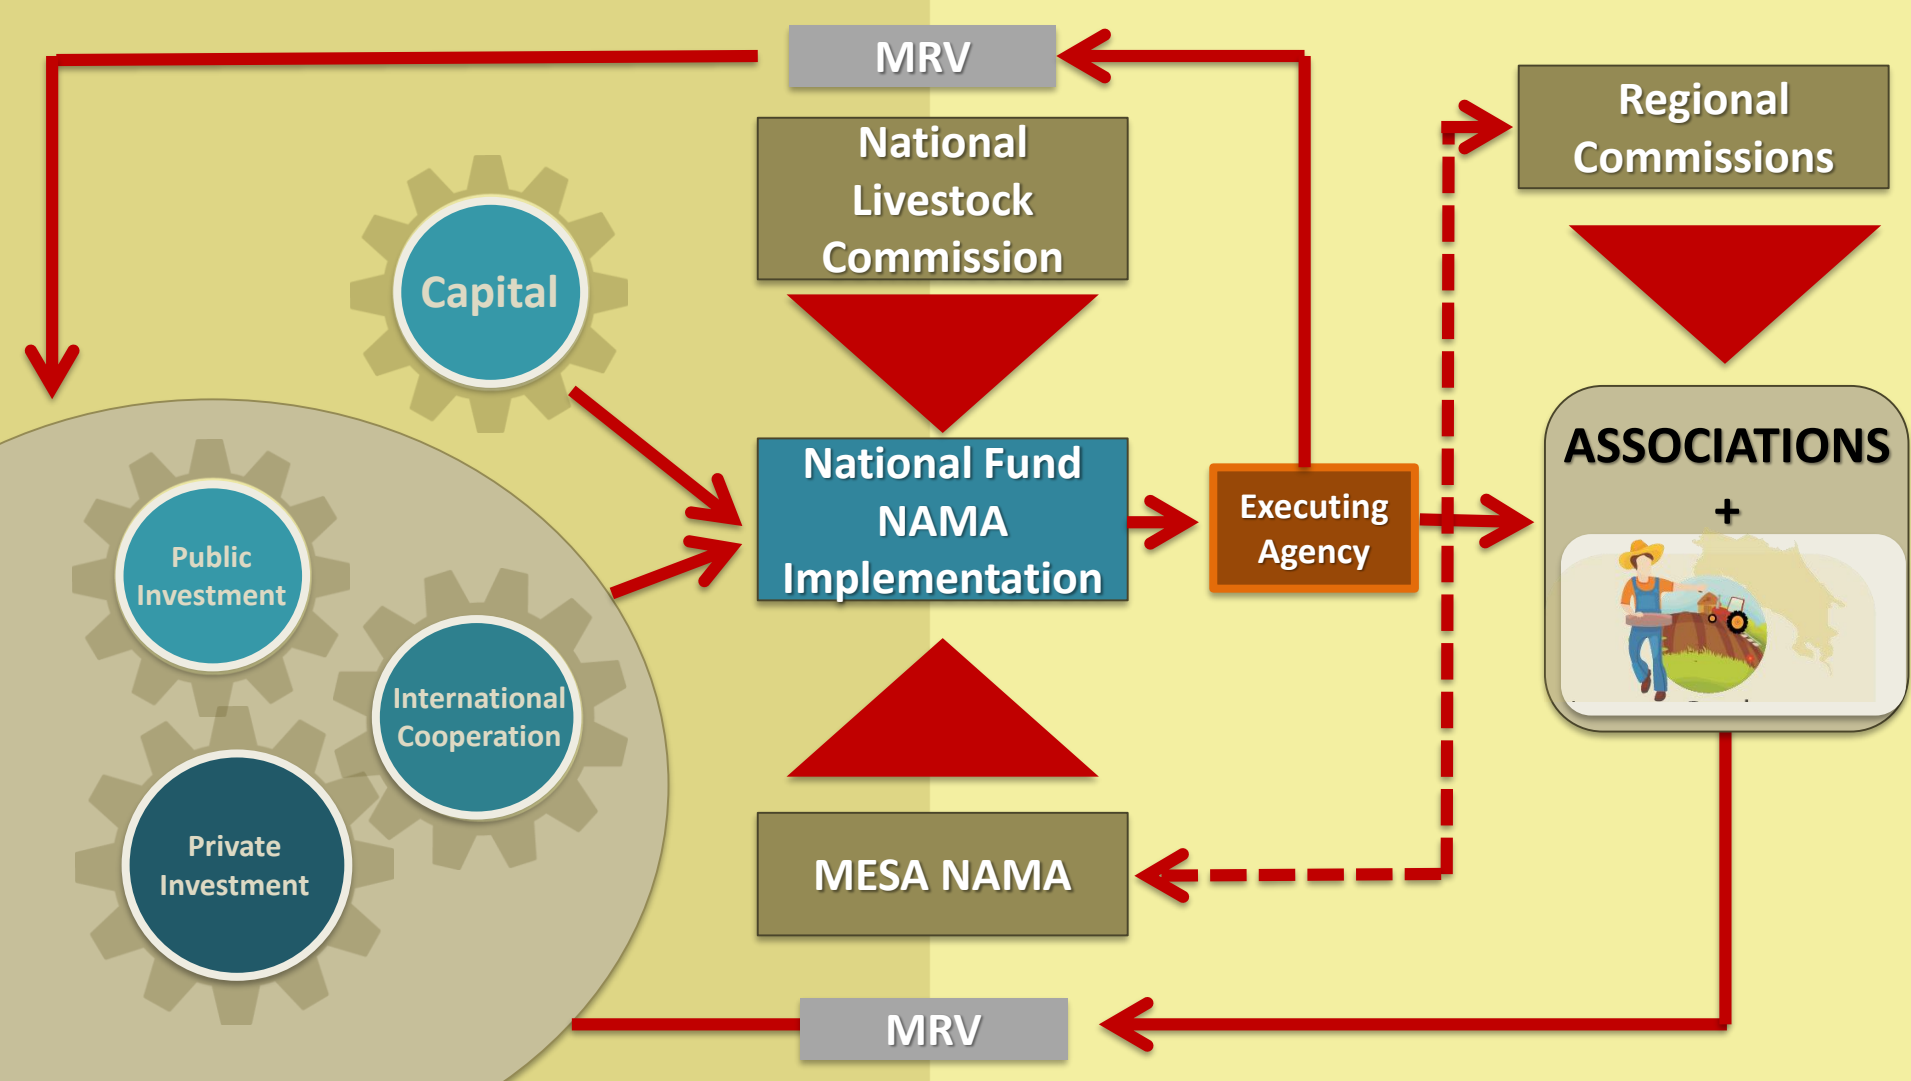

GHG effects

Co-benefits

GOVERNANCE: PUBLIC-PRIVATE COLLABORATION

EXPECTED OUTCOMES

At least
70%
of the herd

At least
60%
of the area used for
livestock production

Thus achieving a potential
mitigation target of

6.000.000
tCO₂e

Through adopted practices,
a total of

4.000.000
tCO₂e are expected to
be offset

A target of
600.000 Ha
of restored landscapes
for livestock production

The reduction of the
vulnerability of livestock
producers to extreme climate
events in a total of

7.000
farms

Increase in forest cover up
to a total of

4%
of national land

By 2030

PROJECT / PROGRAM FINANCING: STAGE TWO

SUPPORT ACTIVITIES	NATIONAL CO-FINANCING (USD MILLION)	INTERNATIONAL COOPERATION (USD MILLION)	COSTS OF SUPPORT ACTIVITIES (USD MILLION)
FINANCIAL MECHANISM	22.50	9.0	41.5
PAYMENT FOR RESULTS (PSA) NATIONAL CREDIT LINES	10.00		
CAPACITY DEVELOPMENT	0.20	1.00	1.20
RESEARCH AND TECHNOLOGY TRANSFER	0.53	2.00	2.53
MRV SYSTEM DESIGN AND OPERATION	0.15	3.00	3.15
TOTAL	33.38	15.00	48.38

CONCLUSION 1 IMPACT

PARTICIPATION

- Public sector engagement
- Private sector engagement
- Producer chambers and associations

From pilot stage

TO

Sub-national stage

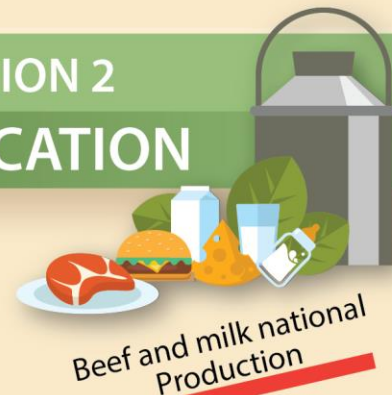

SCALE UP

93
farms

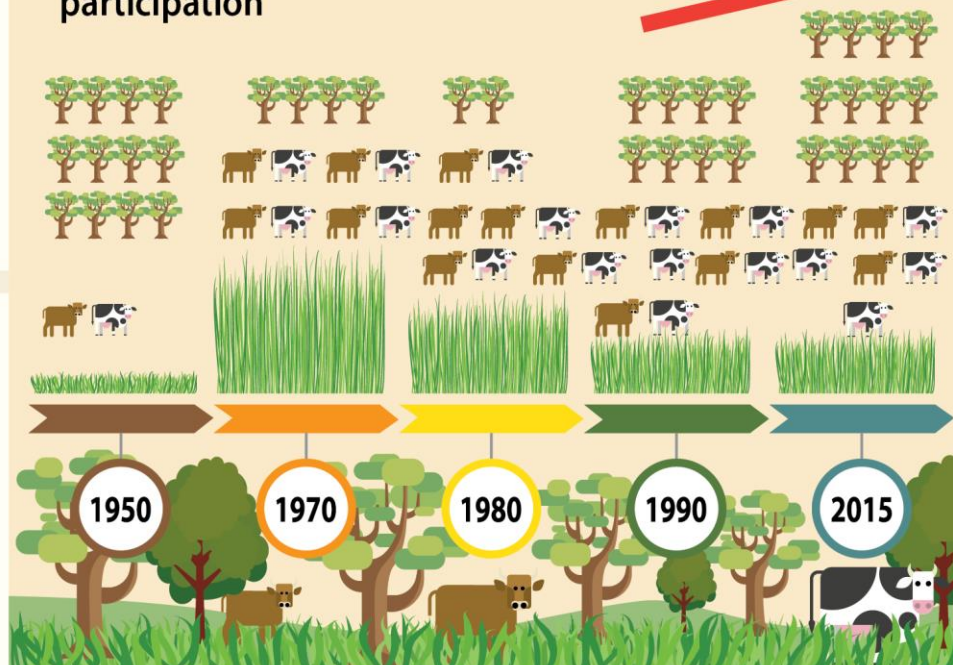

1800
farms

CONCLUSION 2 INTENSIFICATION

Promotion of sustainable intensification practices with private sector participation

Beef and milk national Production

CONCLUSION 3

Innovative financial mechanisms

Conventional
financing
system

Banks and financial
institutions mainly interested
in own profitability

Excess supply that does not
fit producer needs (i.e. high
Interest rates, short payment
periods)

Climate financing system specially
designed for the livestock sector

Result based payments

CONCLUSION 4

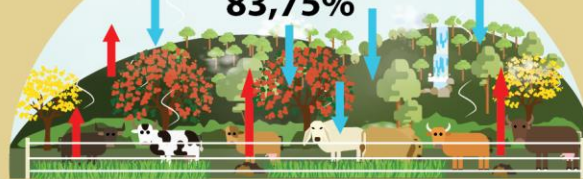

Contribution to INDC's:

Current Greenhouse gases National Inventory

Climate Smart
Development

Livestock sector potential
83,75%

INDC National Target **170.500 ton** CO₂e/year in **2030**

NATIONAL STRATEGY FOR LOW CARBON LIVESTOCK

COSTA RICA ECO-COMPETITIVENESS
