

Abraham Feyissa, Ethiopia

CLIFF-GRADS Project:

Quantification of carbon foot prints in dairy farms for various feeding management in Thailand.

Home University and PhD:

Addis Ababa University, Centre for Environment and Development, Climate Smart Livestock (Dairy) Farming Practices: Exploring GHGs Mitigation Options and Food security impacts.

Host Institute and Supervisor:

Bureau of Animal Husbandry and Genetics Improvement, Department of Livestock Development, Thailand. Dr. Kalaya Boonyanuwat.

About me:

Although the issue of environmental footprints of animal-agriculture remain debatable among scholars, I have always questioned the environmental impacts of livestock production. The understanding of this and my strong research interest and passion lead me to examine animal-agricultural greenhouse gas emission estimation and mitigation measures, which will have local and global significance.

My favorite quote:

"It is not ignorance of the other that challenging environment; it is our failure to recognise a solution for the problem"
