

Cham Donald Alabi, Benin

CLIFF-GRADS Project:

Use of lipids in dairy systems as a strategy of adaptation and mitigation to climate change.

Home University and PhD:

University of Parakou, Agronomy. “Quantification of enteric methane emission in semi-intensive sheep farming system in the center of Benin”.

Host Institute and Supervisor:

National Institute of Agricultural Technology INTA, Argentina; Dr. María Esperanza Cerón Cucchi.

About me:

I am very passionate about animal science and studies relating to greenhouse gas emissions from cattle farming, as well as the mitigation of their effect on global warming. I think that is why I chose the career of animal production and protection of nature. I like hearing updates about new research or knowledge in my fields of interest.

My favorite quote:

“Pray as if all depends on God and work as if all depends on you”
