

Israel Oliveira Ramalho, Brazil

CLIFF-GRADS Project:

Legumes use in grassland systems of the Argentinean Pampas
Region: soil quality and greenhouse gas emissions.

Home University and PhD:

Federal Rural University of Rio de Janeiro, Greenhouse Gas
Emission and Accounting in Livestock.

Host Institute and Supervisor:

National Institute of Agricultural Technology (INTA), Alejandro Costantini, Romina Romaniuk
and Marcelo Beltrán.

About me:

There are no borders to the damage of global warming, so my interest is in efforts by other countries to reduce greenhouse gas emissions. The doctorate requires restlessness, overcoming challenges and desire for change. This is what also motivates me to participate in this exchange.

My favorite quote:

“Love and change things interests me more” (Belchior).
