

Anabella Lozza, Argentina

CLIFF-GRADS Project:

Promising strategies to reduce enteric methane emission from cattle: a meta-analysis.

Home University and PhD:

National University of La Plata, Argentina; Assessment and labelling of the carbon footprint of different livestock systems.

Host Institute and Supervisor:

La Molina National Agrarian University, Peru; Dr. Gomez Bravo, Dr. Arndt and Dr. Eugène.

About me:

I enjoy working in teams, I think that this is very beneficial for my personal and academic development. I feel very fortunate about the opportunity to work with an international researcher's team. I was raised in a family of livestock producers so I grew up very connected to nature. I believe my personal experience strongly influenced my vocation as a researcher on environmental sciences. Besides University, I still work on the family farm in La Pampa, Argentina, and I enjoy the fieldwork on cattle management. I am passionate about contributing to the sustainable management of livestock, by the improvement of farm productivity. I am particularly interested in the extensive livestock systems, and the capability of producers to manage the emissions of their production. I love nature and animals, I have three dogs that I adore. In my spare time, I do pottery, I sew, I knit and I cook.

My favourite quote:

"The secret, Alice, is to surround yourself with people who make your heart smile. It's then, only then, that you'll find Wonderland" excerpt from 'Alice in Wonderland' Disney movie.

RESEARCH PROGRAM ON
**Climate Change,
Agriculture and
Food Security**
