

Boma Iriso, Nigeria

CLIFF-GRADS Project:

Effects of inhibiting methanogenesis on propionate production in the rumen.

Home University and PhD:

University of Port Harcourt, Nigeria; Animal nutrition and agricultural biochemistry (majoring in ruminant nutrition and production).

Host Institute and Supervisor:

National Institute of Agricultural Research (INIA), Chile; Dr. Emilio M. Ungerfeld.

About me:

While growing up, I have always watched great human discoveries in science and technology. But, the greatest discovery on earth is the discovery of one's potential. You must know who you are and your purpose on earth. That is why I am passionate about contributing my quota through research, teaching and community service to make the world better than I met it. I also love to travel in order to explore the uniqueness of global cultural diversity. Finally, I spend my spare time watching football and discussing politics with friends and family.

My favourite quote:

"Build the bridge between identified problems and novel solutions"

RESEARCH PROGRAM ON
**Climate Change,
Agriculture and
Food Security**
