

Juan Pablo Iñamagua, Ecuador

CLIFF-GRADS Project:

Quantification of enteric methane (CH₄) emissions and carbon footprint of silvopastoral systems in the Peruvian Amazon Region.

Home University and PhD:

University of Aberdeen, UK; Environmental Sciences.

Host Institute and Supervisor:

La Molina National Agrarian University, Perú; Dr. Carlos Gómez.

About me:

I am convinced that producing good quality science in the global south can be a way to push forward policies to achieve sustainable development and reduce inequality. My interests are the interaction between agricultural landscapes and ecosystem service provision, studying how to increase the benefits whilst reducing negative effects as a strategy to improve the livelihoods of farmers. I enjoy the time doing field work and when I have spare time, I use it to explore, especially through trail running or hiking.

My favourite quote:

"I will come back and I will be millions" - Túpac Katari
