

Paula Re, Argentina

CLIFF-GRADS Project:

Combining mitigation strategies to enhance soil carbon sequestration without compromising yields in Mediterranean woody cropping systems.

Home University and PhD:

University of Buenos Aires, Argentina; Doctorate in agricultural sciences.

Host Institute and Supervisor:

Spanish National Research Council (CSIC), Spain; Dr. María Mena and Dr. María Bonmati.

About me:

I enjoy traveling, experiencing and interacting with other cultures, especially from my own country. In my spare time I frequent singing, playing the guitar, taking care of my plants (I love plants!), yoga, listening to music and reading.

I believe in “mother nature” (here in Argentina we call it “Pachamama”) and it’s our duty to take care of and respect her while we are passing through here on earth. I want to contribute to global agricultural greenhouse gas emission mitigation, because I want a better and fairer world.

My favourite quote:

“The world is that. A lot of people, a sea of little fires” excerpt from *El libro de los Abrazos* (The book of hugs) by Eduardo Galeano.

RESEARCH PROGRAM ON
**Climate Change,
Agriculture and
Food Security**
